NEW COLOURED PARTS

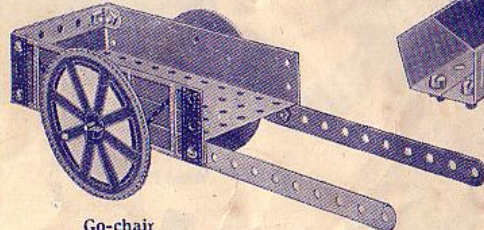

The thirty new models shown on this sheet, and scores of others equally interesting, can be built with the aid of the splendid new coloured parts incorporated in the card in the lid of this Outfit. All that is necessary is to cut the short retaining webs with a pair of scissors. The Wheels, the Signal Arms and the Propeller should be pushed slightly upward from below before the cutting is done.

In building the card parts into models it is better to have the bolt head rather than the nut on the coloured side of the parts, and the bolts should not be screwed up too tightly. Wherever possible, the 3" card Wheels should be supported and kept true on their axles by placing at their centres 1" Pulley Wheels, as shown in the Pony Trap model above.
