

SPECIAL NOTE TO LEAFLET No. 6

STIFF LEG DERRICK

Since the publication of this leaflet the manufacture of the High Voltage Motor has been discontinued, and a 6-volt Motor introduced in its place. This 6-volt Motor will work the model quite satisfactorily, and no alteration to the reduction gearing or to the gear itself will be found necessary. Current for operating the new Motor may be obtained from the Meccano 6-volt 20 amp. hour Accumulator.
