

SPECIAL NOTE TO LEAFLET No. 10

LOG SAW

The High Voltage Motor shown in this leaflet has now been replaced by a 6-volt Motor, which obtains its current supply from a 6-volt 20 amp. hour Accumulator. The use of the new Motor does not necessitate any alteration in the construction of the model, or in the ratios of the reduction gearing. Old-style threaded pins with rounded shanks are shown, but the new type with square shanks may be used instead.
