

SPECIAL NOTE TO LEAFLET No. 19

STEAM SHOVEL

The diameter of the Circular Strip has recently been increased $\frac{1}{2}$ in., and therefore it is necessary to modify slightly the construction of the roller race on which the model slews. This is done most easily by reversing the $\frac{1}{2}$ in. fast Pulleys forming the rollers, so that their bosses come up against the Double Brackets in which are journalled the Rods carrying the $\frac{1}{2}$ in. fast Pulleys. This method makes it unnecessary to use extra parts.
