

SPECIAL NOTE TO LEAFLET No. 24

TRAVELLING GANTRY CRANE

The High Voltage Motor and the 4-volt Motor are no longer manufactured, and have been replaced by a 6-volt Motor, which obtains its current from the Meccano 6-volt 20 amp. hour Accumulator. In order that this new 6-volt Motor may be used, slight alterations must be made to the switch operating lever. A $\frac{1}{2}$ in. \times $\frac{1}{2}$ in. Angle Bracket should be attached pivotally by a lock-nutted bolt to the lower end of the Strip 38 (Fig. 1), and then bolted to one of the horizontal members of the Motor switch.
