BAYKO BUILDING OUTFITS

BAYKO

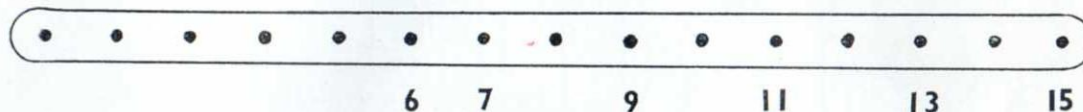

THE MASTER BUILDING SYSTEM FOR GIRLS AND BOYS

A glance through the pages of this Instruction Book indicates the versatility of BAYKO. The models illustrated have been so chosen as to provide a sound basis for obtaining a quick appreciation of the ease and fascination of construction, and the realistic results that can be achieved. The real fun with BAYKO comes when you become your own architect and build models to your own design. BAYKO is easy and clean to handle, yet firm and rigid in construction. Each model is an excellent replica of an actual building, and there is no limit to the range or size of the models that can be built. Skyscrapers, multi-storey flats, hotels and office blocks are typical models that the ambitious builder can build with sufficient standard parts. All parts are standardised for easy construction. Brick markings are clearly defined, and pebble-dash is realistically imitated. Glazed windows, opening doors and a T.V. aerial add very effective touches of realism.

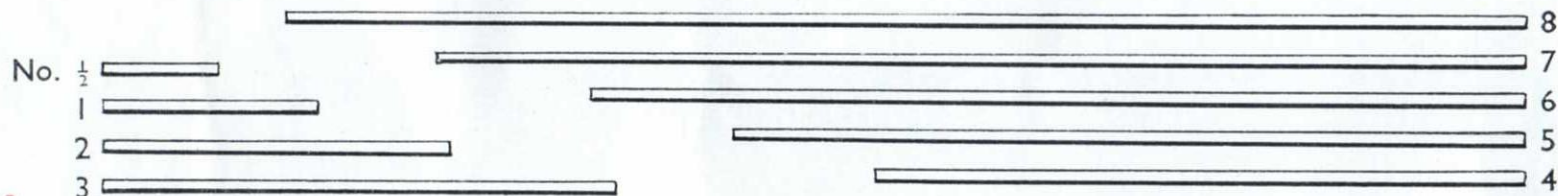

For those who wish to add further reality to the brickwork, a suitable paste of alabastine or whitening can be made and painted on the mortar line of the red bricks. If this is wiped quickly with a clean cloth, it will leave a white deposit in the markings and provide a most pleasing and realistic representation of pointing. As with Meccano, the BAYKO hobby can be started with any main Outfit. Accessory Outfits are available to convert one main Outfit into the next larger. For example, a No. 11 main Outfit can be converted into a No. 12 Outfit by the addition of a No. 11C Accessory Outfit and so on. All BAYKO parts can be purchased separately, and on Pages 23 and 24 the range is given in detail.

The basic building instructions, given on Page 3, should be read carefully before you set out to build your first simple model.

MEASURE FOR FLOORS

LENGTH OF RODS (Actual Size)

HOW TO BUILD A BAYKO MODEL

It is a good plan to commence with one of the simplest models made with No. 11 Outfit in order to become acquainted with the method of building.

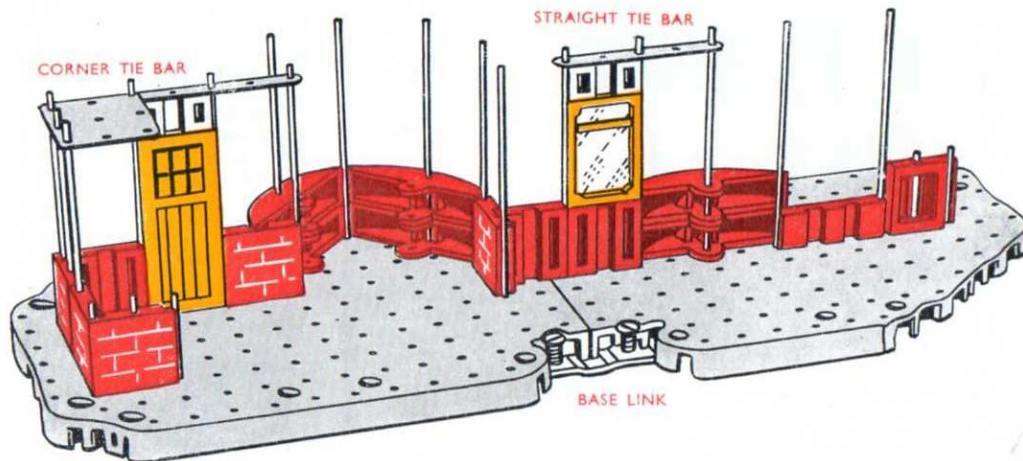

After deciding which model you want to build, count out the listed parts necessary for doing so.

Join the Bases, where necessary, by means of the Base Links as shown on right. Place the rods in the positions marked on the plan, taking care to use the correct lengths. Use standard length rods as marked on each diagram, except where otherwise indicated.

Slide bricks into position between Brick Rods, inserting Doors, Windows, etc. as illustrated. The letters at the sides of the plans indicate the Parts to be used; for example the letters BWH mean, insert in this order, Brick, Window, Half-Brick.

By referring to the diagram on the right the method of fitting Bayko parts is clearly seen. **Particularly notice the method of using Curved Bricks and Curved Windows.**

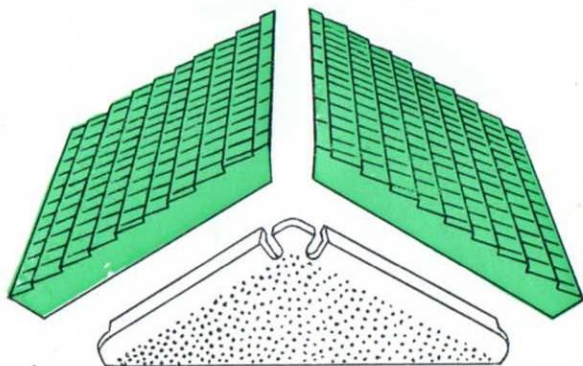

It is helpful to use Tie Bars and Corner Ties after the 3rd row of building.

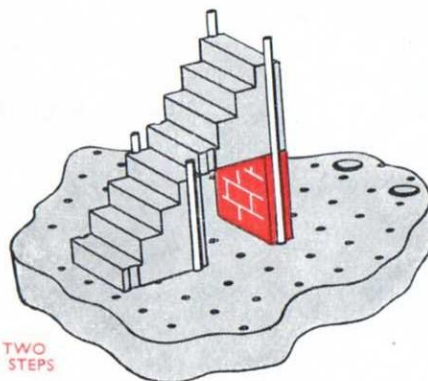

METHODS OF USING BAYKO PARTS

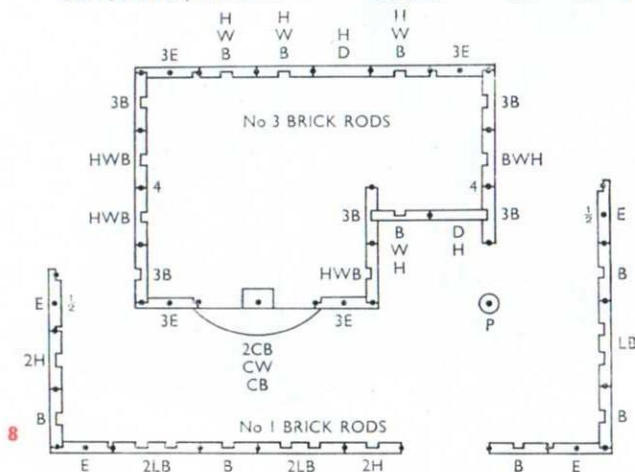

Figure 1 consists of two diagrams: a Plan View (top) and a Section View (bottom). The Plan View shows a wall with a central section labeled 'LB' (Lateral Bracing) and two end sections labeled 'B' (Bracing). The wall is 10 feet long and 10 feet wide. The Section View shows a wall with a central section labeled 'LB' and two end sections labeled 'B'. The wall is 10 feet high and 10 feet wide. The Section View shows the wall is 10 feet high and 10 feet wide. The Plan View shows the wall is 10 feet long and 10 feet wide. The Section View shows the wall is 10 feet high and 10 feet wide.
