

The MODEL BUILDER

A Construction Toy For The Thinking Boy

For
Young Canadian
Craftsmen

Makes Hundreds of
Moving and Still
Models

THE MODEL BUILDER is made in three different size sets from which can be made innumerable models representing, in toy form, many modern mechanical devices, as well as buildings, bridges, furniture, etc.

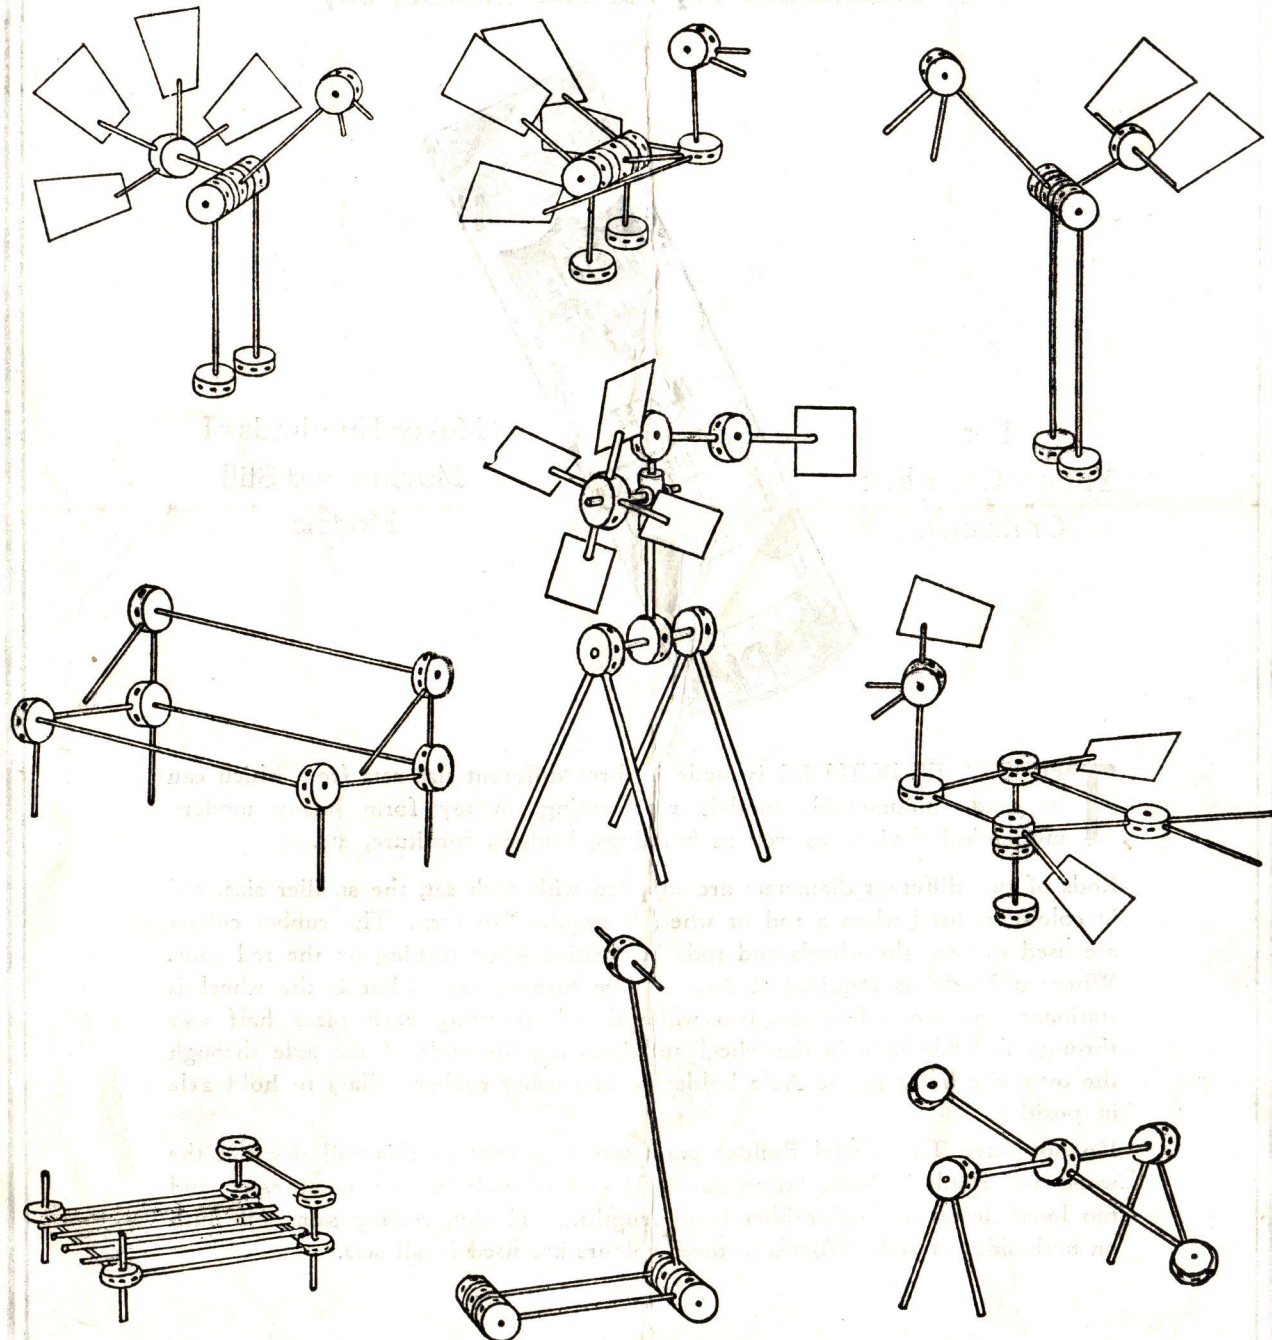

Rods of two different diameters are supplied with each set, the smaller size, red in colour, is used when a rod or wheel is required to turn. The rubber collars are used to keep the wheels and rods in position when turning on the red rods. Where a Model is required to have a free turning axle (that is the wheel is stationary on the axle), use two white dowel, inserting each piece half way through the side hole in the wheel and inserting the ends of the axle through the over size holes in the Axle holder pieces; using rubber collars to hold axle in position.

Do not leave The Model Builder parts too near heat as this will dry out the wood and result in loose fitting parts. If end of rods become compressed and too loose, insert a small rubber band lengthwise in slot, cutting same off flush on both sides of rod. Wheels in three colours are used in all sets.

THE MODEL BUILDER No. O SET

No. O Set will build any Model shown below and many others. The boy with constructive genius will not follow models too closely, but will invent new and different designs.

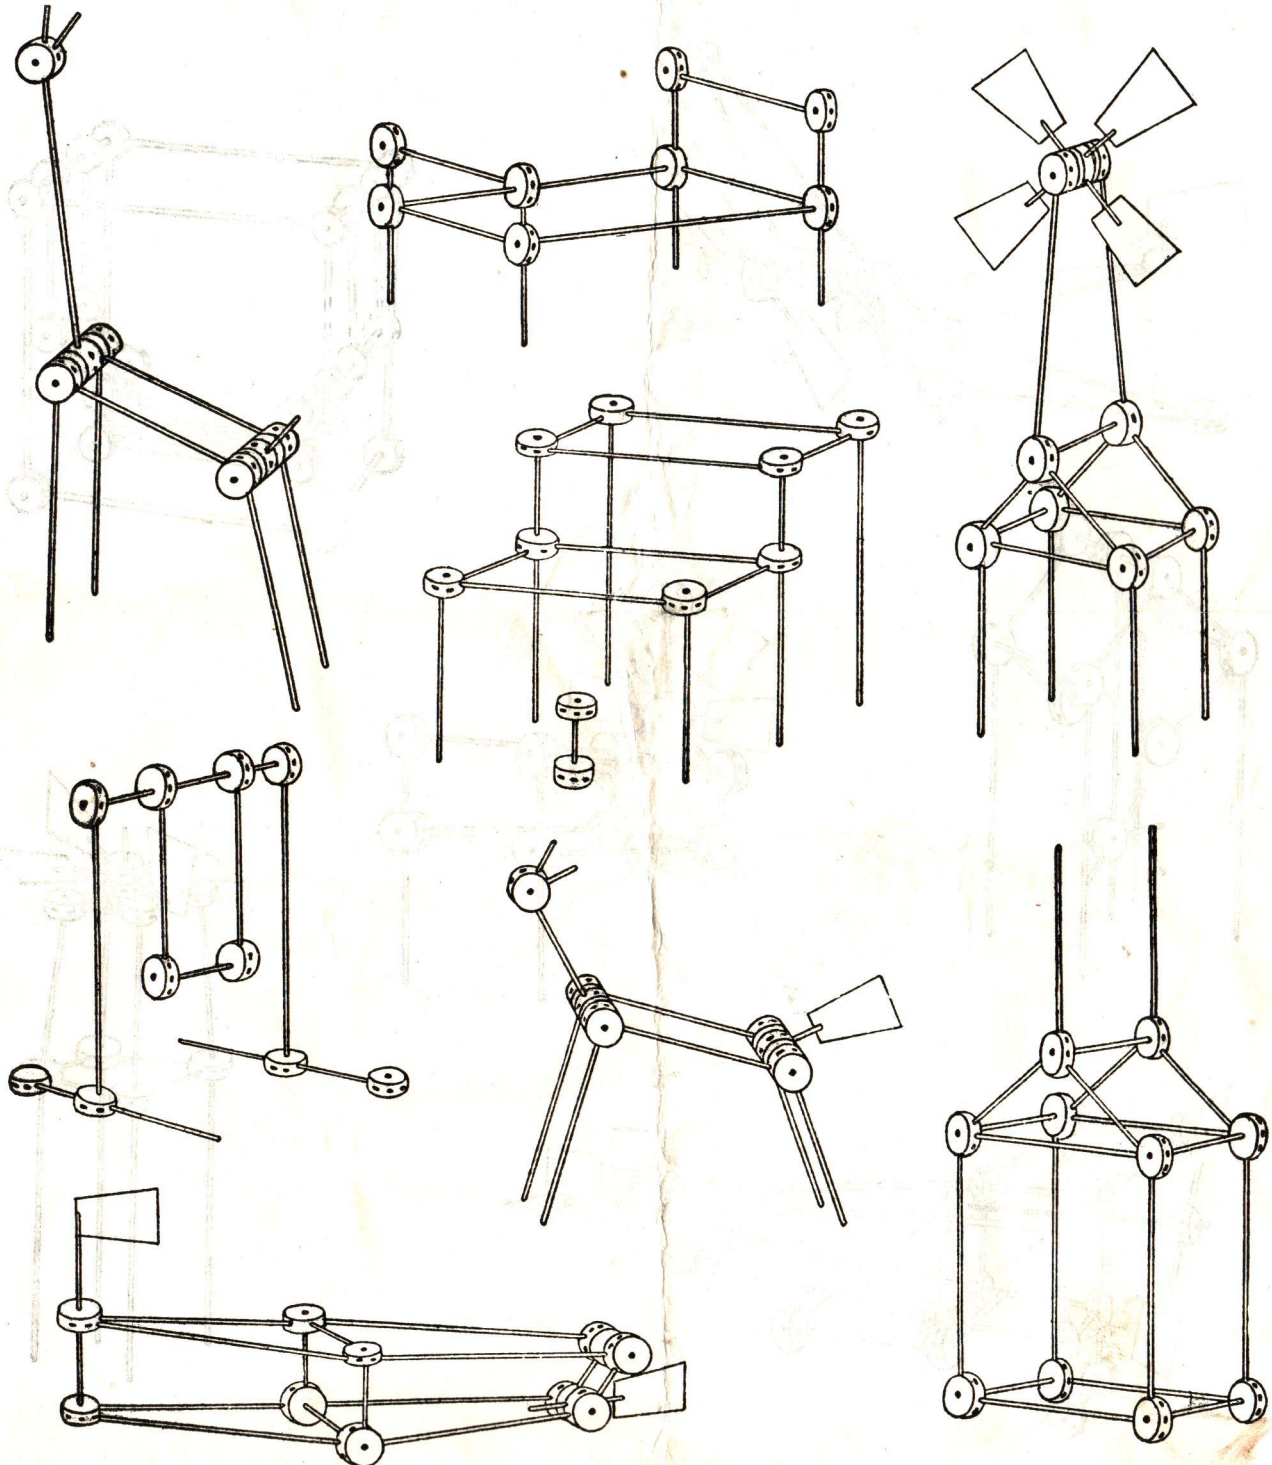

This Set consists of 46 pieces — 25 slotted rods, 7 wheels, 5 fans, 2 axle holders, 6 rubber collars, 1 instruction sheet.

THE MODEL BUILDER No. 1 SET

No. 1 Set consists of 82 pieces — 47 slotted rods, 15 wheels, 7 fans, 4 axle holders, 8 rubber collars, 1 instruction sheet.

This Set will build any model shown below and many others.

THE MODEL BUILDER No. 2 SET

No. 2 Set consists of 137 pieces — 81 slotted rods, 26 wheels, 11 fans, 6 axle holders, 12 rubber collars, 1 instruction sheet.

This Set will build any model shown below and many others.
